SUMMARY

Computer Science student focused on AI, data systems, and full-stack development, with experience spanning deep learning, code intelligence, data analytics, and fault-tolerant web applications.

SKILLS

- **Languages:** Java, Python, Go, SQL, JavaScript
- **Frameworks & Libraries:** React.js, Node.js, Flask, TensorFlow, Scikit-Learn, OpenCV, Pandas, NumPy
- **Databases:** MySQL, PostgreSQL, MongoDB
- **Web Development:** HTML, CSS, REST APIs
- **Tools & Platforms:** Linux, Git, GitHub

INTERNSHIP

Machine Learning Coursework Project – Image Classification

March 2025 – May 2025

Jain University

Bengaluru, India

- Achieved 92% classification accuracy across 5,000+ multi-class image samples while reducing validation loss by 15% through hyperparameter tuning and dropout regularization.
- Accelerated image preprocessing and inference workflows through automated augmentation and OpenCV/NumPy pipelines, mitigating overfitting across diverse test distributions.

PROJECTS

AI-Powered Predictive Stock Analytics & Sentiment Intelligence Engine

[GitHub](#)

- Generated predictive buy/sell signals across 100+ equity tickers by combining NLP-based sentiment extraction with multi-task LSTM and XGBoost models.
- Improved signal accuracy by 18% through time-series feature engineering and streamlined data pipelines while maintaining sub-second real-time inference.

DataLens – Automated Data Profiling & Interactive Analytics Platform

[GitHub](#)

- Automated schema inference, missing-value detection, and statistical distribution profiling across diverse datasets through an end-to-end data exploration dashboard.
- Integrated dynamic visualization workflows and multidimensional filtering to reduce exploratory analysis turnaround time while enabling low-latency data rendering.

CodeGraph – Grounded Architecture Intelligence & Code Understanding Engine

[GitHub](#)

- Enables multi-language code intelligence across Go, TypeScript/JavaScript, and Java through AST-based symbol extraction, dependency mapping, caller/callee analysis, and impact tracing.
- Combines static execution-flow analysis with Reciprocal Rank Fusion (RRF) across lexical, semantic, and graph-based retrieval signals for context-aware code understanding.
- Provides grounded LLM explanations with citation validation and guided reverse-engineering workflows, improving reliability in AI-assisted codebase analysis.
- Supports isolated multi-repository analysis through SQLite WAL persistence and RESTful APIs for repository indexing, graph exploration, and architecture analysis.

CERTIFICATIONS & ACHIEVEMENTS

- **Research Lead, DATA.AI Club:** Led 2+ department-wide technical coding events and workshops, engaging 150+ participants while directing competitive problem statement design and research tracks
- **Smart India Hackathon (SIH 2026):** Earned a Top 50 team selection at Jain University and competed in the 24-hour Internal Hackathon, contributing to a security assessment solution for automated risk analysis and vulnerability prioritization.
- **IBM Z Datathon 2025:** Recognized for active participation in the global datathon by IBM and Shooting Stars Foundation
- **IIT Kanpur (MeitY):** Completed Student Development Program on Java via E & ICT Academy, IIT Kanpur
- **Launched Global:** Completed certified Mentorship Program in Cloud Computing
- **Coursera:** Completed certifications in Google Cloud Data Analytics, Data Warehousing, Cisco Networking, and NLP
- **LeetCode:** Solved 200+ problems in Java and Python

EDUCATION

Jain University

Bengaluru, India

Bachelor of Technology in Computer Science and Engineering

Expected Graduation: 2027

- **CGPA:** 8.41 / 10.0 (Up to Semester VI)
