SUMMARY

Motivated AI and Data Engineering student proficient in Python, Java, Scala, and SQL. Experienced in developing scalable applications and analytical solutions through academic and internship projects.

SKILLS

- **Languages:** Java, Python, Scala, SQL
- **Frameworks:** React.js, Node.js, Flask
- **Libraries:** Pandas, NumPy, Scikit-Learn, OpenCV
- **Technologies:** REST APIs, HTML, CSS, JavaScript

INTERNSHIP

College Internship Project

March 2025 – May 2025

- Developed a CNN-based multi-class image classifier trained on 5,000+ labeled images, achieving 92% accuracy in categorizing cats, dogs, and humans through supervised learning and image processing techniques.

PROJECTS

AI-Based Stock Market Prediction for Enhanced Trading Strategies

[GitHub](#)

- Developed an AI-powered chatbot integrating sentiment analysis and predictive models to deliver real-time insights for 100+ stock symbols.
- Delivered real-time insights on market fluctuations and optimal buy and sell timings using predictive models.
- Integrated natural language processing (NLP) for an interactive and user-friendly conversational experience.

Dynamic Soft-Thresholding for Feature Selection in High-Dimensional Regression

[GitHub](#)

- Evaluated the proposed Dynamic Adaptive LASSO model against Ridge and LASSO baselines over 50 training epochs, improving feature selection efficiency on high-dimensional datasets.
- Implemented and analyzed model performance on high-dimensional datasets using the Ames Housing dataset using dynamic soft-thresholding over 50 training epochs.
- Applied models to the Ames Housing dataset with a structured modular repository (src/, notebooks/, results/) for streamlined training and evaluation.

Sarathi – Smart Tourism & Traveler Safety Platform (SIH 2025)

[GitHub](#)

- Implemented 5+ core features including route optimization, emergency SOS, multilingual support, offline access, and interactive mapping for enhanced traveler assistance.
- Integrated interactive maps, route optimization, emergency SOS services, multilingual support, and offline accessibility to improve traveler safety and convenience.
- Built using JavaScript, HTML, CSS, Leaflet Maps, and Service Workers to ensure reliable and lightweight operation in low-network environments.

CERTIFICATIONS

- Fundamentals of Data Warehousing – Coursera
- Basics of Cisco Networking – Coursera
- Introduction to Data Analytics in Google Cloud – Coursera
- Introduction to Image Processing – Coursera (MathWorks)
- Fundamentals of Natural Language Processing – Coursera (University of Colorado)

EDUCATION

Jain University

Bachelor of Technology in Computer Science and Engineering

- CGPA: 8.41 / 10.0 (Up to Semester VI)

Bengaluru, India

Expected Graduation: 2027
