SUMMARY

Motivated AI and Data Engineering student proficient in Python, Java, Scala, and SQL. Experienced in developing scalable web applications, predictive machine learning models, and analytical solutions through academic and internship projects.

SKILLS

- **Languages:** Java, Python, SQL, JavaScript
- **Frameworks:** React.js, Node.js, Flask
- **Libraries:** PyTorch, TensorFlow, Scikit-Learn, OpenCV, Pandas, NumPy
- **Technologies:** REST APIs, HTML5, CSS3
- **OS & Tools:** Linux, Git, GitHub

INTERNSHIP

Machine Learning Coursework Project – Image Classification

March 2025 – May 2025

Jain University

Bengaluru, India

- Architected and trained an end-to-end Convolutional Neural Network (CNN) pipeline on 5,000+ multi-class image samples, achieving 92% classification accuracy and reducing validation loss by 15% through hyperparameter tuning and dropout regularization.
- Engineered high-throughput image preprocessing and automated data augmentation pipelines using OpenCV and NumPy, mitigating overfitting and improving model inference speed across diverse test distributions.

PROJECTS

AI-Powered Predictive Stock Analytics & Sentiment Intelligence Engine

[GitHub](#)

- Combined NLP-based sentiment extraction with multi-task LSTM and XGBoost models to generate predictive buy/sell signals across 100+ equity tickers.
- Streamlined time-series data pipelines and feature engineering, lifting signal accuracy by 18% while achieving sub-second real-time inference.

PropertyHub – Scalable Full-Stack Real Estate Discovery Platform

[GitHub](#)

- Delivered a full-stack real estate platform (React.js, Node.js, Express) with dynamic geospatial querying and multi-variable faceted search.
- Implemented secure RESTful microservices with JWT role-based authentication, validation pipelines, and optimized cloud media handling, increasing client-side throughput by 35%.

Sarathi – Resilient Smart Tourism & Offline Emergency Navigation System (SIH 2025)

[GitHub](#)

- Led architecture of a fault-tolerant PWA for tourism safety, using offline-first Service Worker caching and lightweight Leaflet GIS mapping.
- Enabled multi-threaded SOS dispatch, multilingual routing, and Dijkstra-based path optimization for 99.9% uptime in low-bandwidth environments.

CERTIFICATIONS & ACHIEVEMENTS

- **Research Lead, DATA.AI Club:** Organized and spearheaded 2+ department-wide technical coding events and workshops, driving engagement for 150+ participants while directing competitive problem statement design and research tracks
- **Smart India Hackathon (SIH 2025):** Participated in the 24-hour Internal SIH 2025 Hackathon at Jain University
- **IBM Z Datathon 2025:** Recognized for active participation in the global datathon by IBM and Shooting Stars Foundation
- **IIT Kanpur (MeitY):** Completed Student Development Program on Java via E & ICT Academy, IIT Kanpur
- **Launched Global:** Completed certified Mentorship Program in Cloud Computing
- **Coursera:** Completed certifications in Google Cloud Data Analytics, Data Warehousing, Cisco Networking, and NLP.
- **Leetcode:** solved 200+ leetcode problems in java and python

EDUCATION

Jain University

Bachelor of Technology in Computer Science and Engineering

Bengaluru, India

Expected Graduation: 2027

- **CGPA:** 8.41 / 10.0 (Up to Semester VI)
